

A new addition to Planner is the LexCom Audio range. LexCom Audio is Schneider Electric's latest Multi-Room Audio and Video system entirely wired using CAT-5e UTP cable.

The range offers single and multi-source audio (6 sources) hubs and a multi-source video (6 sources) hub capable of supplying high fidelity audio and video to up to 8 zones and 8 additional subzones.

Each one of these zones can include a "local" input for easy connection of a personal Mp3 player/iPod or has the potential to be upgraded to a full 5.1 Home Cinema system.

Whether you opt for the active in-ceiling or on-wall speaker designs all speakers in the range have IR capability making the need to fit keypads in each zone an option rather than a necessity. Integration to existing speakers is also achievable using the LXHQZAM40 Zone Amplifier Module.

Conveniently your A/V equipment does not have to co-habit the same space that the hubs occupy and any A/V source can be connected back to the hubs via a run of CAT-5e UTP and a simple input plate. Controlling these sources is also simple as LexCom Audio features full infra-red reticulation over CAT-5e and offers a choice of two remotes one of which is fully programmable and can control up to 6 A/V sources.

For those wanting to impress the range also includes monochrome or colour touchscreens and a 3 output 160Gb Music Server with in-built internet radio.
